Vinish Venkatachalam

Data Engineer | +91 9894731669 | vinishvenkatachalam29@gmail.com | LinkedIn | Chennai, Bangalore

Summary

Data Engineer with 2+ years of experience building and supporting cloud-based data pipelines, data transformation workflows, and analytics solutions on Microsoft Azure. Hands-on experience with Azure Data Factory, Azure Synapse Analytics, Azure Databricks, PySpark, Python, SQL, Cosmos DB, and Power BI, covering data ingestion, transformation, validation, cleansing, and reporting. Experienced in working with Bronze/Silver/Gold data architectures, incremental data processing, SQL-based transformations, and production application support. Strong problem-solving mindset with practical experience in data quality analysis, pipeline troubleshooting, and delivering reliable, analytics-ready datasets.

Professional Experience

Associate Data Engineer | Nallas Technologies India Private Limited | Coimbatore | Sept 2024 – Sept 2026

Projects: Data Modernization & Analytics | Membership Application Support & Data Operations

- Enhanced and maintained 20+ cloud-based data pipelines using Azure Data Factory, Azure Synapse Analytics, PySpark, SQL, and ADLS Gen 2 to ingest, transform, validate, and prepare Salesforce data for analytics.
- Built and scheduled 100+ ADF dataflows supporting data ingestion, transformation, and downstream processing.
- Created 25+ Silver and Gold layer transformations using Synapse SQL and PySpark following the Bronze/Silver/Gold Medallion Architecture.
- Generated SQL transformation scripts and analytical Gold tables to deliver reliable, analytics-ready datasets for reporting and downstream consumption.
- Carried out source-to-target validation, data cleansing, reconciliation, and data quality analysis across Salesforce and Azure data platforms.
- Assisted 15+ Power BI dashboards, including 10+ dashboards with 70+ visuals, by validating datasets, transformations, and report outputs.
- Collaborated with the Data Modeling team on Salesforce join configurations supporting 25+ dashboards and assisted in migrating 25+ DOMO pipelines and dashboards to Power BI.
- Contributed to 25% of the incremental CDC implementation for analytical data pipelines and aided UAT and production data releases.
- Supported a production membership-registration application involving Salesforce, Azure Cosmos DB, Azure Data Factory, Azure Functions, SQL Server, Python, and Postman.
- Investigated and resolved data synchronization and data quality issues across Profile, Profile Roles, Membership, Contact, Account, and related entities.
- Analyzed discrepancies between Salesforce and Cosmos DB, performed 30+ root-cause analyses, and enforced appropriate data correction and reconciliation activities.
- Developed and fine-tuned reusable Python validation scripts with dynamic object and column parameters, enabling source-to-target validation across multiple datasets.
- Performed SQL-based data analysis, cleansing, reconciliation, and database activities across QA and production environments.

Personal Project

Retail Data Engineering & AI Analytics | Azure Databricks

Technologies: Azure Databricks, PySpark, Python, SQL, Delta Lake

- Designed an end-to-end retail data engineering platform integrating 8+ business entities including orders, customers, products, inventory, branches, and transactions, with automated ingestion and transformation workflows.
- Developed PySpark and SQL transformation pipelines to generate analytics-ready datasets for sales, customer, product, inventory, and branch-level analysis.
- Implemented incremental data processing and MERGE-based upserts to efficiently handle new and updated records while reducing unnecessary full-data processing.
- Executed Slowly Changing Dimension (SCD) Type 2 logic to maintain historical changes in selected dimension data and enable accurate point-in-time analysis.
- Built reusable data transformation and validation logic to improve data quality, consistency, and reliability across the analytical data layers.

Skills

Programming: Python, Core Java
Query Languages: SQL, PL/SQL, Spark SQL, DDL
Microsoft Azure: Azure Data Factory (ADF), Azure Databricks, Azure Synapse Analytics, ADLS Gen2, Azure Cosmos DB
Data Engineering: Data Pipelines, ETL/ELT, Data Transformation, Data Validation & Cleansing, Data Wrangling, Incremental Data Processing, Change Data Capture (CDC), Medallion Architecture, Slowly Changing Dimensions (SCD), Data Lakes, OLAP
Big Data & Data Platforms: Apache Spark, PySpark, Hadoop, Delta Lake, Apache Kafka
Databases & Tools: SQL Server, SSMS, Docker
Analytics & Visualization: Power BI, Data Modeling, DOMO
DevOps & Version Control: CI/CD, Git, Azure DevOps
Operating Systems: Windows, Linux

Certifications

- Databricks Certified Data Engineer Associate
- Microsoft Certified: Azure Data Fundamentals (DP-900)

Education

Bachelor of Engineering in Computer Science and Engineering

Aug 2020 – May 2024

Knowledge Institute of Technology | CGPA: 8.63/10
